

Step 3b: Neuron-Level Analysis

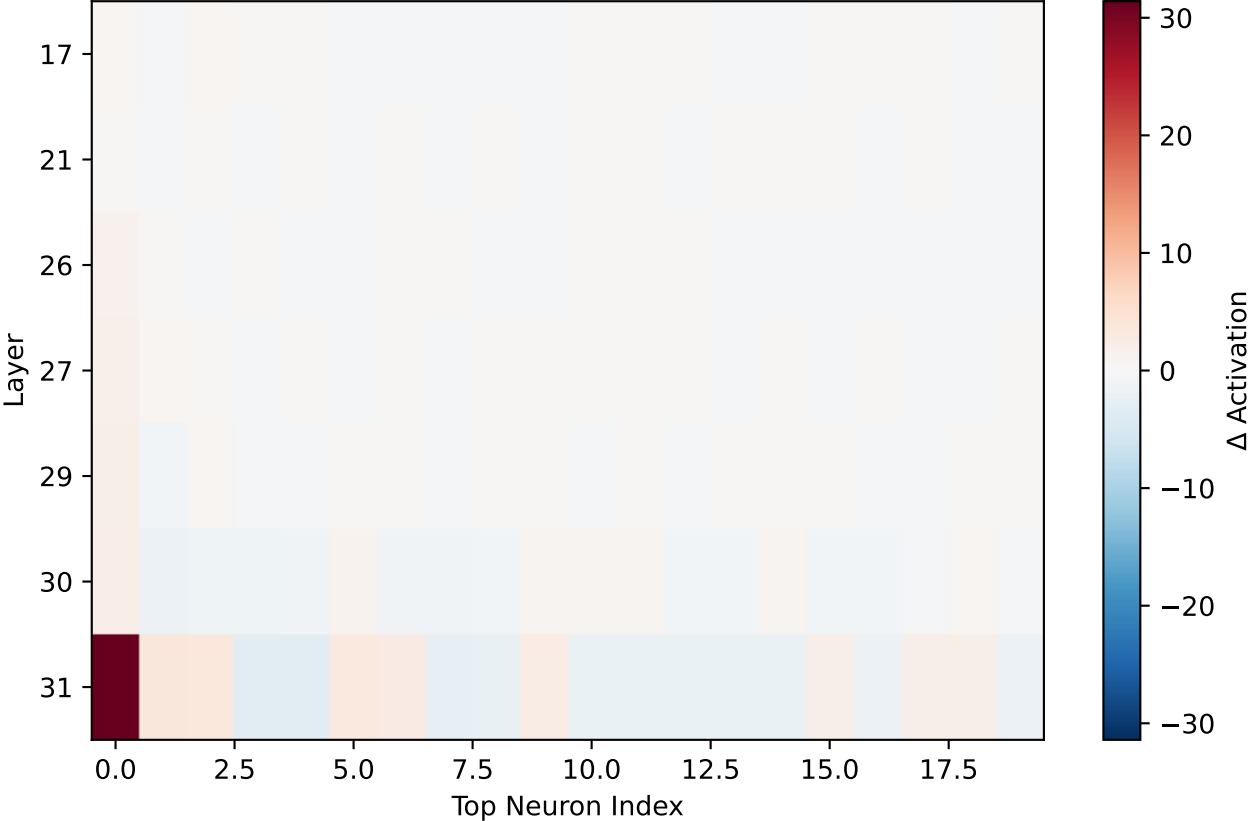

Neuron Activations → Correctness
(Logistic Regression)

Layer 21: Neuron Activation Differences

Top Neurons by Activation Difference

NEURON-LEVEL ANALYSIS SUMMARY

Samples analyzed: 1000
Overall accuracy: 32.1%

Best layer for correctness prediction: Layer 21
- Train accuracy: 0.911
- Test accuracy: 0.880

Key findings:
- Neurons CAN predict correctness (test acc > 50%)
- Some neurons are specifically important for correct vs incorrect predictions
- L1 regularization reveals sparse set of "task neurons"

Top predictive neurons in Layer 21:
- Higher for correct: [2673, 1235, 1683]
- Lower for correct: [1890, 438, 790]
